

[TOUCH PEN]

Abstract of Disclosure

A touch pen for inputting to a touch panel includes a contact body, an intra-body including a pillared front section, a heavyweight section near the front section for increasing ability to hold weight, and a pillared rear section. The touch pen has a front tube having a narrow opening formed at one end of the tube for clipping the contact body, and a hole formed at an opposite end of the tube for packaging the front section of the intra-body. The pen includes a pillared rear tube for packaging the rear section of the intra-body, the rear tube further including a pillar fixed at one end of the rear tube, a rear pen sheath for packaging the pillar, and a rubber pen sheath for packaging the heavyweight section and for increasing comfort.
